

RSS-2000

The RSS-2000 Synthetic Track Surface is a 100% polyurethane-bound base mat/structural spray track system, which offers outstanding all-weather performance and spike resistance. The paved-in-place base layer provides exceptional shock absorption with excellent rebound properties. Two layers of pigmented polyurethane mixed with EPDM rubber are spray-applied to provide a highly textured and durable surface.

The RSS-2000 Track System consists of:

- Two texturized structural spray coats consisting of polyurethane and colored EPDM rubber
- 11mm paved SBR/polyurethane binder base mat
- Excellent force reduction with proven durability and low maintenance
- Installed using state-of-the-art fully automatic paving and continuous mixing equipment
- Ideal for all levels of competition, including international and professional
